

AMENDMENTS TO THE ABSTRACT:

A cutter of a juicer includes three arcuate blades arranged in equiangular positions and at different horizontal levels. Each blade has a convex side formed with an arc-shaped serrate knife-edge having ~~forming~~ a plurality of serrate knife teeth for reaming foods rapidly when the blades rotate. Each serrate knife-edge has a flat back side and a tail end that form an included angle. The included angles of the three blades are different because of the different curvatures of their respective serrate knife-edges.
